

# Space Pilot Game Manual

**By: Zhongtian Zhai, Yujia Hu**

Welcome to Space Pilot, an exciting and challenging space exploration game! In Space Pilot, you take on the role of a skilled pilot navigating through various levels, overcoming obstacles, collecting stars, and landing safely at designated landing areas. Here's your comprehensive game manual to help you navigate the cosmos:

**Objective:** Your primary goal is to successfully land your spaceship before running out of fuel. Navigate through various levels, carefully choosing your route, and overcoming obstacles to achieve a safe landing.

## **Control:**

**W / S:** Move your spaceship forward and backward in your current direction (the backward speed cannot be negative as designed).

**A / D:** Rotate your spaceship left and right.

**Obstacles and Stars:** Space is rife with challenges and opportunities. Be cautious of random obstacles that can destroy your spaceship. The blue floating obstacles and rocks(marked by different colors as different layers of rocks in the cave) in the cave do exist. However, there are wandering stars scattered throughout space(they rotate in a small circle), providing the chance to earn extra points. Decide wisely whether to take risks in pursuit of these valuable stars.

**Fuel:** Your spaceship has a limited supply of fuel. Keep a close eye on your fuel gauge, as running out of fuel will result in the end of the game. Plan your routes strategically to ensure a safe landing within the fuel constraints. Beginning with level 5, the game will reduce the fuel amount to 4000. Subsequently, the fuel will decrease by 100 for each level, continuing this pattern until it reaches the minimum fuel threshold of 1000. If you run out of fuel in a level, you have the chance to restart this level instead of restarting the game.

**Life:** While navigating the cosmos, your spaceship may sustain damage. Fortunately, you have components on board for repairs. You have three chances to repair your spaceship and continue your journey. Once you exhaust all three chances and crash again, it's game over and you need to restart the game. If you navigate your spaceship out of the boundary, your life remainings will decrease.

**Scoring:** The number of successful landings directly correlates with your score. Additionally, capturing wandering stars will contribute to earning extra points. Strive for precision in your landings and seize opportunities to boost your score.

**Level:** As you progress through the game and achieve successful landings, you'll unlock higher levels. Each level presents increased challenges and rewards. Test your piloting skills and aim for higher scores as you advance through the cosmic landscapes.
